### **Support Agreement Management – Digital (SAM-D)**

The Support Agreement Management – Digital (SAM-D) tool modernizes the creation, routing, and tracking of non-reimbursable support agreements within the Department of Defense. It is designed to align with DoDI 4000.19 and streamline the traditionally paper-based process.

#### **Key Features**

- AI-Driven Workflow: Automatically routes agreements for review and notifies Support Agreement Managers (SAMs) when action is required.
- Reviewer-Specific Interfaces: Civil Engineering, Security, Finance, Legal, and Manpower reviewers each get a dedicated interface for streamlined inputs.
- Dynamic Monitoring: Tracks agreement status, pending reviews, and approvals in real-time.
- Role-Based Controls: Ensures secure access and traceable interaction throughout the agreement lifecycle.
- Export Options: Agreement data and formats can be exported to PDF for routing and recordkeeping.

#### **Deployment Readiness**

SAM-D is ready for demonstration through a web-based interface. It is optimized for fast deployment, with potential future enhancements including DoD enterprise identity integration (e.g., CAC, EAMS-A) and automated document storage.
